

Robert Romero

ROB@CYBER-ROB.COM | Fort Worth, TX | 682-438-4730

Entry-level software engineer with a B.S. in Computer and Cybersecurity Engineering and hands-on experience building Python-based data pipelines, debugging complex systems, and improving large-scale technical workflows. Strong background in root cause analysis, automation, and QA from roles at Apple, including a hardware/data internship on the AirPods team. Excited to build and deploy AI-driven applications on cloud platforms, collaborate in agile teams, and rapidly grow as an AI Software Engineer at IBM.

Apple Inc. — Fort Worth, TX

Technical Expert (Sep 2022 — Present)

- Analyzed high-volume service infrastructure data to optimize technical workflows and reduce system downtime during peak operational hours.
- Analyzed high-volume service infrastructure data to optimize technical workflows and physical planograms, ensuring repeatable processes and reduced system downtime
- Engineered a peer-to-peer Quality Assurance (QA) framework that increased adherence to technical service protocols from 6% to 75%, ensuring enterprise-level compliance standards.
- Identified inefficiencies in the store's closing and inventory procedures. Redesigned the Standard Operating Procedures (SOPs) and physical planogram, establishing a continuous feedback loop that improved team closing efficiency and data accuracy.
- Collaborated with team leaders to identify recurring repair room issues and redesign the planogram and daily operations. Documented layouts, closing duties, and refill processes, establishing a continuous feedback loop to ensure these changes were implemented and sustained for consistent team efficiency.
- Partnered with leadership to analyze "Connect and Personalized" service metrics, driving a behavioral strategy that led to the store ranking #1 in the market for conversion growth.
- Performed advanced hardware diagnostics and root cause analysis on complex technical systems, reducing repeat repairs and identifying critical performance bottlenecks

Technical Specialist (Jul 2021 - Aug 2022)

- Delivered personalized front-line tech support with 90%+ satisfaction and 3.25+ sessions/hour.

- Performed advanced diagnostics and root cause analysis across Apple devices, reducing repeat repairs.

Hardware & Engineering Intern — AirPods Team

Apple Inc., San Diego, CA — Jul 2023 - Dec 2023

- Developed Python-based ETL pipelines for large-scale dataset ingestion, optimizing data flow and reducing system failure rates by 20%.
- Utilized SQL to perform complex queries on connectivity logs, identifying bottlenecks and informing global firmware updates.
- Performed data validation and QA across iOS/macOS platforms to detect bugs, enhance stability, and ensure accurate reporting of connectivity metrics.

EDUCATION

- University of North Texas — Denton, TX
- BS, Computer and Cybersecurity Engineering

SKILLS

Systems & Infrastructure: Workflow Optimization, Root Cause Analysis, SOP Development, QA Testing.

Programming & Data: Python (Pandas/Automation), SQL, Excel Pivot Tables, Data Validation. SQL, Python (Pandas/NumPy)

Networking & Security: KPI Tracking, Service Metrics, Queue Management

CERTIFICATIONS

-

**Google Cybersecurity Certificate (Coursera)
— Completed**

-

Certified Network Defender (CND) — Completed

CLEARANCE

- U.S. Citizen — Eligible for Government Security Clearance
- References available upon request
